

JavascriptLevel-1

Ctrl → L To clear console window

• use REPL

• Read-evaluate-print-Loop

• upward & downward - For

Variable

↳ name of a storage location

name = " " "

age =

a =

Data Types in JS

• primitive type

↳ Number

• positive & negative = 14 & -4

• Integers = 5

• floating number = 8.2

↳ operations : (binary operators)

• add

① remainder (%)

• sub

② exponential (Power operator)

• multi

$2 * 3 \mid a * b$

• Divi

base power

↳ NaN

• The NaN global property is not a number.

- 0/0, NaN-1, NaN*1

Operator Precedence

↳ BODMAS in math's

• order

• ↓ ()

• ↓ **

• ↓ *, /, %

• ↓ + -

in equal priority
Left to right
in eqn

Keywords

↳ let

↳ const

↳ var

• let

- syntax of declaring variable

ex → let a = 5;

let age = age + 1;

let b;

let sum = a + b;

• const

↳ You cannot change with re-assignment or redeclare

• const pi = 3.14;

const g = 9.8;

• var

↳ old syntax of writing var

var age = 28;

var cpa = 8.9;

Assignment operators.

i) =

ii) +=

iii) -=

iv) *=

let age = age + 1

age += 1

Unary operators

↳ single operand

$a++$, $b++$,

$age--$, $age++$,

increment & decrement

↳ pre $++p$ ↳ pre $--a$

↳ post $p++$ ↳ post $a++$

change use

use then change

Rule's / Identifier

↳ name contain letters, digits, $_{-}$ & $\$$ (no space)

↳ name begin with letters or (no number) $\$$, $-$, $\$$ ✓

↳ case-sensitive

↳ Reserve d words (let, var, const) ✗

ways →

↳ Camel Case first small then capital
java, c, js

↳ Snake-case all small
python

↳ Pascal Case 1st & 2nd capital

Boolean (T/F)

↳ assign only true / false

TypeScript

↳ static typed

$a = 5$;
~~then~~ ✗
 $a = \text{True}$

↳ micro-soft

vs JavaScript

↳ dynamic typed

$a = 5$
 $a = \text{True}$ ✓ then

String

↳ are text or seq. of character

eg. let name = "Tony"

↳ work in " " & ' '

↳ also single alpha & number

't' 'a'

use
"Tony"
'a'

String indices

↳ let name = "TONY STARK";

T O N Y _ S T A R K
0 1 2 3 4 5 6 7 8 9

↳ To access

name[0] = 'T' ✓ o/p

name[5] = 'S'

↳ get length → property

name.length;

undefined & null

• undefined;

JS know not then he say

let name; you are value & say

NULL

↳ used to intentionally absence

let a = null;

↳ you can reinitialize also
